

PROGRAMME SPECIFICATION

This document describes the **Honours Degree programmes in Environmental Geology**. This specification is valid for new entrants from **September 2006**.

The aims of the Honours Degree programmes in Environmental Geology are:

- to provide a sound and extensive basis for the study of Geology relating to the natural environment, by developing relevant knowledge and understanding, and transferable skills;
- to provide a flexible and progressive structure in which students are able to gain knowledge, understanding and appropriate skills relating to distinctive research specialisms;
- to equip students with the knowledge and skills appropriate for a career in the Earth Sciences, and generally to provide them with a range of personal attributes relevant to the world beyond Higher Education, enabling them to engage in lifelong learning and to contribute to the wider community.

Programme are delivered in three stages, each of which comprises one year of full-time study during which the student must follow courses to the value of four units (one unit is equivalent to 30 national credits). It is characterised by strong progression and opportunities for specialisation through the programme. Stage one provides a broad-based introduction to the subject through four compulsory lecture-based courses which consider major themes of geological knowledge and skills. The programmes also have a strong compulsory spine, running into stages two and three, in research training and fieldwork, culminating in the production of an independent project. Stage two contains 6 compulsory Earth Sciences courses, plus one in Geography; these are integrated courses in substantial areas of the discipline which form a bridge between the introductions provided in stage one and the research-led specialist options in stage three. These specialist courses are closely informed by the active research of staff, particularly in the general areas of: natural geohazards, contemporary and long-term environmental change and management; coastal and estuarine sedimentary environments; environmental pollution; the Earth's resources; modern atmospheres.

Further information

[Indicators of quality and standards](#)

[List of programmes, with details of awards, degree titles, accreditation and teaching arrangements](#)

This document provides a summary of the main features of the programme(s), and of the outcomes which a student might reasonably be expected to achieve if full advantage is taken of the learning opportunities provided. Further information is contained in the College prospectus, the College Regulations and in various handbooks issued to students upon arrival. Whilst Royal Holloway keeps all its information for prospective applicants and students under review, programmes and the availability of individual courses are necessarily subject to change at any time, and prospective applicants are therefore advised to seek confirmation of any factors which might affect their decision to follow a specific programme. In turn, Royal Holloway will inform applicants and students as soon as is practicable of any substantial changes which might affect their studies.

Learning outcomes

Teaching and learning in the programmes are closely informed by the active research of staff. In general terms, the programmes provide opportunities for students to develop and demonstrate the following learning outcomes:

Knowledge and understanding of

- the composition and structure of the Earth, and how these influence the natural environment;
- the concept of spatial variation, and thinking in 3-dimensional space and 4-dimensional space and time;
- the operation of physical systems in, and on the surface of, the Earth;
- the significance of time and historical change in the physical world;

- the contribution made by Geology to the development of knowledge;
- the main methods and decision-making strategies used in the critical analysis and interpretation of geological information;
- the bases for informed concern about the Earth and its resources.

Skills and other attributes

The programmes are designed to allow students to acquire competence in the ability to:

- plan, design and execute a piece of rigorous research or enquiry, including the production of a final report;
- undertake effective field and laboratory studies (with due regard for safety and risk assessment);
- work safely in a scientific laboratory, with awareness of standard procedures;
- prepare effective geological and geographical maps and diagrams using a range of appropriate technologies;
- employ a variety of technical and laboratory-based methods for the collection and analysis of spatial and environmental information (such as environmental sampling, dating techniques, geochemistry, sedimentary logging, statistical analysis, GIS);
- collect and critically analyse different types of geographical and geological evidence (such as texts, imagery, maps, digital and laboratory data);
- recognise the moral and ethical issues involved in debates and enquiries;*
- describe, recognise and interpret rocks and minerals in the field and laboratory;
- critically judge and evaluate evidence, assessing the merits of contrasting theories, explanations and policies;*
- solve problems and make decisions;*
- abstract and synthesise information;*
- develop a reasoned argument, and express it verbally or in writing;*
- develop numeracy, spatial awareness and observation;*
- use information technology (including spreadsheets, databases, word processing, e-mail and the world-wide web);*
- employ information handling and retrieval (including the use of on-line computer searches); identifying, retrieving, sorting and exchanging information; investigating a wide range of sources;*
- work with groups/teams, recognising and respecting the viewpoints of others;*
- take responsibility for their own learning, developing habits of reflection on that learning.*
- in addition, this programme fosters the development of a range of personal attributes that are important in the world of work, and that strengthen students' abilities to engage in lifelong learning and contribute to the wider community. These include: personal motivation; the ability to work autonomously and with others; self-awareness and self-management; empathy and insight; intellectual integrity; awareness of responsibility as a local and international citizen; interest in lifelong learning; flexibility and adaptability; creativity.*

* transferable skills

Teaching, learning and assessment

Knowledge learning outcomes are best thought of as general ways of thinking which stretch across different courses and sub-disciplinary areas. As students progress through the programme, they should develop a greater depth of knowledge and understanding of the subject areas, through their application and interpretation in particular geological sub-disciplinary contexts. Particular training in geological skills is given in the skills and research training 'spine' to the degree programme, through the compulsory courses. Other courses in the programme also develop and assess these skills in specialist contexts. Students also complete a programme in study skills with their personal tutor by means of the tutorial system. Students are also expected to meet basic standards in information technology, for which training is provided by the College Computer Centre through a range of information technology skills programmes. Other methods used to develop skills and knowledge are: lectures, seminars, small-group tutorials, practicals, problem-solving workshops, field and laboratory work, group work, guided independent research, and guided independent study.

Assessment of knowledge and understanding is by formal examinations, coursework essays and other exercises, fieldwork reports, oral presentations and the independent project. Skills are additionally assessed by means of practical exercises including laboratory work, problem-solving workshops and oral

and poster presentations. Full details of the assessments for individual courses can be obtained from the [Department](#).

Details of the programme structure

Please note that not all courses run each year. A full list of courses including optional courses for the current academic year can be obtained from the [Department](#).

Single Honours Degree programmes in Environmental Geology

Stage one:

Students must take:

- GL1100 Global Tectonics (½ unit)
- GL1200 Introductory Sedimentology (½ unit)
- GL1300 Environmental Issues (½ unit)
- GL1460 Igneous and Metamorphic Geology (½ unit)
- GL1500 Physics and Chemistry of the Earth (½ unit)
- GL1600 Earth Structures (½ unit)
- GL1700 Mathematics for Geologists (½ unit)
- GL1800 Introductory Palaeontology (½ unit)

Stage two:

Students must take:

- GL2200 Stratigraphy and the History of Life (½ unit)
- GL2210 Regional Geology (½ unit)
- GL2320 Geohazards (½ unit)
- GL2410 Geochemistry (½ unit)
- GL2901 Field Methods in Geology (1 unit)

And a choice of course to a value of 1 unit in either Earth Sciences or Geography

Students may also choose to take:

GL3141 Applied Geology (Industrial Placement) (1 unit) in addition to final year courses. This is a 9-12 month work experience placement, between stages two and three.

Stage three:

Students must take:

- GL3001 Advanced Concepts and Techniques in Geology (1 unit)
- GL3300 Aqueous Geology (½ unit)
- GL3321 Environmental Geology Project (1 unit)
- GL3940 Methods of Environmental Investigation (½ unit)

and choose options equal to the value of 1 full unit from:

- GL3210 Advanced Topics in Sedimentology (½ unit)
- GL3340 GIS and Remote Sensing (½ unit)
- GL3460 Volcanology (½ unit)
- GL3750 Mineral Resources (½ unit)

(Students may replace one option with another ½ unit course in Earth Sciences or Geography)

[Back to top](#)

Progression and award requirements

The progression and award requirements are essentially the same across all Honours Degree programmes at Royal Holloway. Students must pass units to the value of at least three units on each stage of the programme. On some programmes there may be a requirement to pass specific courses in order to progress to the next stage, or to qualify for a particular degree title. Students are considered for the award and classified on the basis of a weighted average. This is calculated from marks gained in courses taken in stages two and three, and gives twice the weighting to marks gained in stage three. In order to qualify for the award, students must gain a weighted average of at least 35%.

Students who are registered for all BSc and MSci programmes within Earth Sciences, but who fail to graduate will be eligible for the award of Diploma of Higher Education if they have:

- Fulfilled the requirements to progress from the second to third stage of their degree programme.
- Passed at total of four units from the second and third years.

[Back to top](#)

Student support and guidance

- Personal Advisers: All students are allocated a personal adviser who meets with them regularly through the programme. The personal adviser's role is to advise on academic, pastoral and welfare issues. Students may choose to be allocated a different personal adviser at any stage during the programme.
- Degree Programme coordinators and the Academic Coordinator provide a back-up system of academic, pastoral and welfare advice.
- All members of staff are available and accessible during office hours.
- Detailed student handbook and course resources, provided via the Web where appropriate.
- Representation on the Student-Staff Committee.
- Extensive supporting materials and learning resources in College and University libraries and Computer Centre.
- Dedicated departmental teaching laboratories and computing facilities.
- College Careers Service and departmental Careers Service liaison officer.
- Access to all College and University support services, including Student Counselling Service, Health Centre, Students' Union and the Education Support Office for students with special needs.

[Back to top](#)

Admission requirements

The Department's standard conditional offer is available on the [Course Catalogue](#) web page. However, the Department also has considerable flexibility in its admissions and offers policy and strongly encourages applications from non-standard applicants. Students whose first language is not English may also be asked for a qualification in English Language at an appropriate level. It may also be helpful to contact the [Admissions Office](#) for specific guidance on the entrance requirements for particular programmes.

[Back to top](#)

Further learning and career opportunities

Graduates from Earth Sciences degree programmes have successfully progressed into a wide range of professions, while some have continued onto Postgraduate studies. In addition to the services offered by the College Careers Service, the Department has strong alumni links. Links with employers are fostered through the Department's External Advisory Board. The following Masters programmes are available within the Department: MSc Petroleum Geoscience (Basin Evolution and Dynamics), MSc Petroleum Geoscience (Tectonics), MSc Environmental Diagnosis and Management, MSc Geology by Research, and there is also the relevant MSc in Quaternary Science in the Department of Geography. The degree programmes are accredited by the Geological Society of London as a pathway to professional status for graduates. For further details please refer to the [Careers Service](#).

Indicators of quality and standards

Royal Holloway's position as one of the UK's leading research-intensive institutions was confirmed by the results of the most recent Research Assessment Exercise (RAE 2008) conducted by the Higher Education Funding Council (HEFCE). The new scoring system for the RAE 2008 measures research quality in four categories, with the top score of 4* indicating quality that is world-leading and of the highest standards in terms of originality, significance and rigour. 60% of the College's research profile is rated as world-leading or internationally excellent outperforming the national average of 50%. The College is ranked 16th in the UK for research of 4* standard and 18th for 3* and 4* research. The Department of Earth Sciences was ranked joint 7th in the top 10 universities in the country in terms of proportion of 3* and 4* research, with 70% of its research profile being of 3* and 4* standard.

[Back to top](#)

List of programmes

All the programmes are taught entirely by staff at Royal Holloway, University of London, and either lead to degree awards of the University of London or alternatively Diploma of Higher Education awards of Royal Holloway and Bedford New College. Degree programmes in Earth Sciences (with the exception of Petroleum Geology and the joint degree with Biology) are subject to accreditation by the Geological Society of London and the aims and outcomes reflect this. The QAA subject benchmark statements in Earth Sciences, Environmental Sciences and Environmental Studies describe the general features which one might expect from Honours Degree programmes in the subject, and can therefore be used as a point of reference when reading this document (see www.qaa.ac.uk). UCAS codes are given in parentheses (see www.ucas.ac.uk).

Single Honours Degree programmes in Environmental Geology

BSc Environmental Geology (F630)

BSc Environmental Geology with a Year in Industry (F690)

Diploma of Higher Education

(Only available to students registered for BSc or MSci in these subjects but who fail to graduate, subject to passing required courses as detailed in the Progression and award requirements section. Not available for admission through UCAS)

DipHE in Environmental Geology
