

Rare Disease Day 2021

Royal Holloway University of London

British Society for Gene & Cell Therapy

The aim of the **British Society for Gene and Cell Therapy** is to speed up scientific progress in gene- and cell-based technologies for the treatment of a range of serious diseases, such as cancer, heart disease and disorders that are caused by single gene defects, including rare diseases.

Getting lab-based work experience

Lab-based experience really enhances your CV and UCAS application. It can give you the edge over other applicants by demonstrating your commitment to increasing your skills and experience.

in²science^{UK}

BSGCT have partnered with In2Science to provide paid summer lab placements for gifted A-level science students. Scan the QR code!

TIP: Use university websites to look at what research is going on. If you find something of interest, write to the head of that lab and they may offer you a placement!
