ROYAL HOLLOWAY University of London

PROGRAMME SPECIFICATION

This document describes the Master of Science, Postgraduate Diploma and Postgraduate Certificate in Mathematics of Cryptography and Communications. This specification is valid for new entrants from September 2017.

The aims of the MSc in Mathematics of Cryptography and Communications are to:

- provide a suitable mathematical foundation for undertaking research or professional employment in cryptography and/or communications;
- provide students with the appropriate background in information theory and coding theory to enable them to understand and be able to apply the theory of communication through noisy channels;
- provide students with the appropriate background in algebra and number theory to develop an understanding of modern public key cryptosystems;
- provide students with a critical awareness of problems in information transmission and data compression, and the mathematical techniques which are commonly used to solve these problems;
- provide students with a critical awareness of problems in cryptography and the mathematical techniques which are commonly used to provide solutions to these problems;
- give students the opportunity to carry out an independent research investigation into the mathematics of cryptography and/or communications;
- provide students with a range of transferable skills appropriate to progression to PhD studies or employment,
 including experience with independent research and managing the writing of a dissertation.

The programme is delivered over one year of full-time study (52 weeks). The programme is also available part time; students would normally complete the programme within 2 years (104 weeks) but College regulations permit up to five years of part-time study (260 weeks). It provides in-depth training and research experience entirely at Masters level. Students receive training in generic scientific and discipline-specific research skills.

Royal Holloway is internationally regarded as a centre of excellence in cryptography research and this programme complements the extremely successful MSc in Information Security which has been running for over ten years. The MSc is taught by members of the Mathematics Department and the Information Security Group and students have the opportunity to be supervised by researchers covering a wide range of research topics.

Further information

Learning outcomes

Teaching, learning and assessment

Details of the programme structure(s)

Progression and award requirements

Student support and quidance

Admission requirements

Further learning and career opportunities

Indicators of quality and standards

List of programmes, with details of awards, degree titles, accreditation and teaching arrangements

This document provides a summary of the main features of the programme(s), and of the outcomes which a student might reasonably be expected to achieve if full advantage is taken of the learning opportunities provided. Further information is contained in the College prospectus, the College Regulations and in various handbooks issued to students upon arrival. Whilst Royal Holloway keeps all its information for prospective applicants and students under review, programmes and the availability of individual courses are necessarily subject to change at any time, and prospective applicants are therefore advised to seek confirmation of any factors which might affect their decision to follow a specific programme. In turn, Royal

Holloway will inform applicants and students as soon as is practicable of any substantial changes which might affect their studies.

Learning outcomes

Teaching and Learning in the programme are closely informed by the active research of staff. In general terms, the programme provides opportunities for students to develop and demonstrate the following learning outcomes:

Knowledge and understanding of:

- the principles of information transmission, data compression and information theory;
- the principles of communication through noisy channels using coding theory;
- the principles of cryptography as a tool for securing data;
- the algebra and number theory behind public key cryptography;
- the mathematics behind symmetric key cipher systems;
- the principles of cryptanalysis and experience with some of the algorithms used to break cryptosystems;
- the role and limitations of mathematical ideas in information security.

Skills and other attributes:

- demonstrate a high level of ability in subject specific skills, including algebra and number theory;
- ability to clearly formulate problems and express technical content and conclusions in written form;*
- time management;*
- self-motivation, flexibility and adaptability;*
- computer skills;*
- ability to critically analyse the strengths and weaknesses of solutions to problems in cryptography and communications.
- synthesise information from a number of sources with critical awareness;*
- evaluate research critically;*
- preparation of an MSc dissertation (MSc only).*

Back to top

Teaching, learning and assessment

For the taught courses, teaching is mainly by lectures, supported by weekly written coursework assignments. Learning is augmented by occasional computer projects and independent private study using books, course notes and the internet. For the dissertation, learning is by independent research and private study, supported by research supervision. Students receive regular feedback on their performance on coursework for taught courses; their detailed research proposal (end of examinations term); and dissertation drafts near the completion of the project. Completion of tasks is monitored centrally to ensure students experiencing difficulty can be identified and provided with appropriate support.

Assessment is mainly by examination in May for the taught courses. Some courses may also require extended essays, reports, computer programming or oral examinations. The dissertation is submitted at the end of the summer, approximately two weeks before the beginning of the next academic year. For details of the assessment of the main project see the Programme Handbook. Full details of the assessments for individual courses can be obtained from the <u>Department</u>.

Back to top

Details of the programme structure(s)

The MSc programme comprises six weighted taught courses (120 credits), up to two supplementary courses, and the MSc dissertation (60 credits). The two supplementary courses appear on students' transcripts but do not

^{*} transferable skills

contribute to the final degree classification. Students decide towards the end of the second term which courses are to be considered as supplementary. At the discretion of the Programme Director, a student may attend up to two courses (as supplementary courses) from the third or fourth year of the undergraduate programme in Mathematics, for example to fill a gap in their knowledge from undergraduate study. Students are encouraged to divide their courses equally between the two terms, or over additional years in the case of part-time students.

The brief outline of the programme is shown below; however students can obtain further details from the Programme Handbook. The number of credits required for the MSc is 180, for the PGDip the number required is 120 credits and for the PGCert it is 60 credits. Where weightings are indicated in brackets, these refer to weightings within the MSc. The programme structure for the PGDip is as below, with the exception that students will not undertake the dissertation. Weightings for courses within the PGDip are proportionate, but exclude the dissertation. For the PG Cert students are required to take and pass courses to the value of 60 credits.

Students must take the following mandatory courses:

- (i) MT5441: Channels (20 credits) condonable
- (ii) MT5461: Theory of Error Correcting Codes (20 credits) condonable
- (iii) MT5462: Advanced Cipher Systems (20 credits) condonable
- (iv) MT5466: Public Key Cryptography (20 credits) condonable
- (v) MT5400: MSc Project (60 credits) non-condonable

And choose two optional courses (40 credits) and two supplementary courses (non-weighted) from a list of courses offered by the Department. The two supplementary courses appear on students' transcripts but do not contribute to the final degree classification.

<u>Please note that the list of available courses offered is subject to change and not all courses run each year. A full list of current courses can be obtained from the Department.</u>

Part-time arrangements

Part-time Masters students are typically expected to take four courses (80 credits) in their first year (typically the mandatory courses would be taken in the first year) and complete the remaining courses and the dissertation in the second year**. Part-time students following the standard 2 year model will be encouraged to begin work on their dissertation during the summer between their first and second years.

** part time students are permitted under College regulations to complete their programme of study over a period of up to 5 years. Students who are unable to complete the programme within the standard 2 year timeframe should liaise with the programme director to agree a time frame for completion.

Back to top

Progression and award requirements

Progression throughout the year/s is monitored through performance in oral presentations, contributions to seminar discussion and coursework.

Please note that if you hold a Tier 4 (General) Student Visa and you choose to leave (or are required to leave because of non-progression) or complete early (before the course end date stated on your CAS), then this will be reported to UKVI.

To pass the **Master's** programme a student must achieve an overall weighted average of at least 50.00%, with no mark in any course which counts towards the final assessment falling below 50%. Failure marks between 40-49% can be condoned in courses which constitute up to a maximum of 40 credits, provided that the overall weighted average is at least 50.00%, but a failure mark (i.e. below 50%) in the dissertation cannot be condoned.

The Master's degree with Merit may be awarded if a student achieves an overall weighted average of 60.00% or above, with no mark in any course which counts towards the final assessment falling below 50%. A Merit will not normally be awarded if a student re-sits or re-takes any course of the programme.

The Master's degree with Distinction may be awarded if a student achieves an overall weighted average of 70.00% or above, with no mark in any course which counts towards the final assessment falling below 50%. A Distinction will not normally be awarded if a student re-sits or re-takes any course of the programme.

The **Postgraduate Diploma** may be awarded if a student achieves an overall weighted average of at least 50.00%, with no mark in any taught course which counts towards the final assessment falling below 50% *and* has either chosen not to proceed to the dissertation, or has failed the dissertation on either the first or second attempt. Failure marks in the region 40-49% are not usually condoned for the award of a Postgraduate Diploma, but if they are, such condoned fails would be in courses which do not constitute more than 40 credits.

The Postgraduate Diploma with Merit may be awarded if a student achieves an overall weighted average of 60.00% or above, with no mark in any course which counts towards the final assessment falling below 50%.

The Postgraduate Diploma with Distinction may be awarded if a student achieves an overall weighted average of 70.00% or above, with no mark in any course which counts towards the final assessment falling below 50%. A Distinction will not normally be awarded if a student re-sits or re-takes any course.

The **Postgraduate Certificate** may be awarded if a student achieves an overall weighted average of at least 50.00%, with no mark in any taught course which counts towards the final assessment falling below 50%. Failure marks in the region 40-49% are not usually condoned for the award of a Postgraduate Certificate.

The Postgraduate Certificate with Merit may be awarded if a student achieves an overall weighted average of 60.00% or above, with no mark in any course which counts towards the final assessment falling below 50%.

The Postgraduate Certificate with Distinction may be awarded if a student achieves an overall weighted average of 70.00% or above, with no mark in any course which counts towards the final assessment falling below 50%. A Distinction will not normally be awarded if a student re-sits or re-takes any course.

Student support and guidance

- The Programme Director meets the students during the induction meeting at the beginning of the academic year (if not earlier during the application and admissions process). The Programme Director acts as a point of contact for pastoral support and any questions about the programme throughout the year.
- MSc dissertation supervisor: By the end of term 2 each student's supervisor will have been determined. Students should meet their supervisor regularly to discuss all matters relating to their dissertation.
- All students are allocated a personal adviser, with whom they meet at least once a term, and more regularly if required, to discuss all matters relating to their programme and for pastoral support.
- Representation on the Student-Staff Committee.
- Each lecture course includes regular homework problem sheets to be attempted by the student. The coursework is marked and returned to the student with feedback on their performance. This formative assessment is valuable for both students and staff.
- All academic staff are available and accessible through an open-door policy or by operating an office hours system.
- Detailed PG Handbook and course booklets.
- Extensive supporting materials and learning resources in the Department, College and University libraries, as

- well as the Computer Centre.
- College Careers and Employability Service and Departmental Employability Lead officer.
- Access to all College and University support services, including Student Counselling Service, the Centre for the Development of Academic Skills, Health Centre, Students' Union and students with additional learning needs also have access to Disability and Dyslexia Services (ESO).
- Secretarial and technical support staff as detailed in the handbook.

Admission requirements

For details of admissions requirements please refer to the **Course Finder**.

Back to top

Further learning and career opportunities

The programme prepares students for future careers in mathematical research and/or development in the general area of communications and information security. The programme also develops students' generic skills. After obtaining this degree, students would be well prepared to begin doctoral studies, for a technical role in the certain industries (e.g., communications), or for employment in any area where good numeracy, computer skills and general mathematical knowledge are valued. Information on career opportunities is provided by talks on careers and higher degree opportunities, organised by the Careers Service. For further details on further learning and career opportunities please refer to the <u>Careers Service</u>.

Indicators of quality and standards

Royal Holloway's position as one of the UK's leading research-intensive institutions was confirmed by the results of the most recent Research Excellence Framework (REF 2014) conducted by the Higher Education Funding Council (HEFCE). The scoring system for the REF 2014 measures research quality in four categories, with the top score of 4* indicating quality that is world-leading and of the highest standards in terms of originality, significance and rigour and 3* indicating research that is internationally excellent. 81% of the College's research profile was deemed to be within the 4* or 3* categories, an increase of over 20% since 2008. This results for the quality of our research outputs placed Royal Holloway 15th in the UK based on an overall Grade Point Average (GPA) score and 20th in the UK for 4* and 3* research. The Department of Mathematics is ranked 18 in the UK for research of 4* standard and 5 for 3* and 4* research and is ranked within the top 5 departments for their subject in the UK.

List of programmes

The programme is taught entirely by staff at Royal Holloway, University of London and leads to an MSc award of the University of London. The Postgraduate Diploma leads to an award of Royal Holloway and Bedford New College. Programmes in Mathematics of Cryptography and Communications are not subject to accreditation by a professional body. The Banner programme codes are given in parentheses.

Master of Science Degree programme in Mathematics of Cryptography and Communications

MSc in Mathematics of Cryptography and Communications (2130)

Postgraduate Diploma in Mathematics of Cryptography and Communications

PG Diploma in Mathematics of Cryptography and Communications (2131)

Postgraduate Certificate in Mathematics of Cryptography and Communications

PG Certificate in Mathematics of Cryptography and Communications (3073)
